

Evidence Tracking for IUI

Evidence is your guarantee for maximum security in your fertility treatment.

Evidence is a documentation system that will reinforce the clinic's existing procedures by keeping track of all containers and utensil lots from hand-out of semen cup to transfer or cryo storage. A system that replaces human double-witnessing and provides staff and patients with peace of mind knowing that the system prevents mix-ups.

All samples from the patient and partner will be attached a human readable label with a unique 2D barcode and their personal data to verify the identity of the samples during the entire treatment.
